USA

IRSS is the most important society in rough set-related research communities. We would like the web site of IRSS to become one of the major hubs of information for researchers by extending the current excellent web site in the following two areas:

- (1) Establish additional mirror sites, one in North America and one in Asia, to further increase accessibility and visibility of the web site.
- (2) Establish and make available a comprehensive bibliography of publications database in rough set theory and its related areas using the EndNote software tool to facilitate collaborations (this would be in addition to and would serve to complement the existing rough set RSDS database).
- (3) Establish links between various rough set-based research centres and the IRSS web page.
